

Operation Manual

Fiber Optic Illuminator

Model 21AC
Model 21DC

Warning

⚠ This symbol is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

! This symbol is intended to alert the user to the presence of important operating and maintenance (servicing) instructions to the literature accompanying the appliance.

Important **TÜV CE**

This equipment has been tested and found to comply with IEC 61010-1 and UL3101-1 as an Overvoltage Category II: (local level, small appliances, portable equipment, etc. with smaller transient overvoltages than Overvoltage Category III.)

Pollution II.

Caution

You are cautioned that any change or modifications not expressly approved in this manual could void your authority to operate this equipment.

Precautions

On Power Sources

- Before operating the product, check that the operating voltage is identical to your local power supply. See specific descriptions for operating voltages.
- This unit is not disconnected from the AC power source as long as it is connected to the wall outlet, even if the unit itself has been turned off.
- To disconnect the AC power cord, grasp the plug itself; never pull the cord.
- One blade of the plug is wider than the other for the purpose of safety and will fit into the wall outlet only one way. If you are unable to fully insert the plug into the outlet, contact Techniquip.
- AC power cord must be replaced with IEC compatible cord.

On Operation

- Before connecting to fiber optic components, be sure that all power connections are secure.

On Cleaning

- Clean the cabinet, panel and controls with a soft cloth slightly moistened with a mild detergent solution. Do not use any type of abrasive pad, scouring powder or solvent such as alcohol or benzine.

If you have any questions or problems concerning your product,
please consult Techniquip.

For Customers in Canada

CAUTION

TO PREVENT ELECTRIC SHOCK, DO NOT USE THIS POLARIZED AC PLUG
WITH AN EXTENSION CORD, RECEPTACLE OR OTHER OUTLET UNLESS
THE BLADES CAN BE FULLY INSERTED TO PREVENT BLADE EXPOSURE.

Owners Record

The model and serial number are located on the bottom of the unit. Record the
serial number in the space provided below. Refer to them whenever you call
upon your Techniquip dealer regarding this product.

Unpacking - MODEL 21AC

Check that you received all items on the packing list.

Hookup Overview

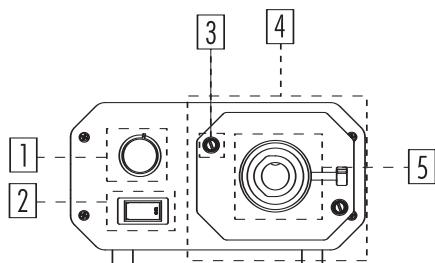

The Model 21AC Illuminator allows you to connect and control a variety of fiber optic components. To learn the locations and names of important connections see "Illuminator Descriptions" beginning on this page below.

Before You Get Started

- Turn off the power to the Model 21AC Illuminator before making any connections.
- Do not connect the AC power cord to the local power supply until the connections are completed to the Model 21AC Illuminator.
- Be sure to make connections firmly.
- Be sure that the Model 21AC operating voltage matches the "local" power supply.

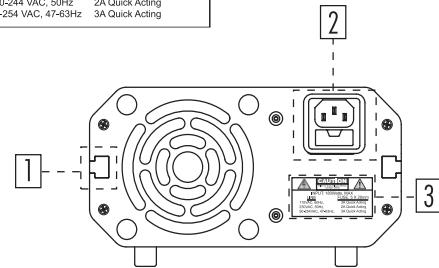

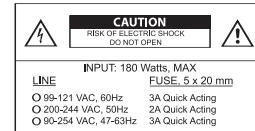

Illuminator Descriptions (Front Panel)

1. Variable intensity controller (0 to 100%).
2. On/Off rocker switch.
3. Front panel fasteners (2X)
4. Lamp module.
5. V-port with T-handle retainer

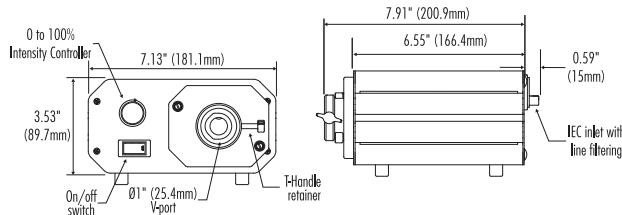

Illuminator Descriptions (Rear Panel)

1. T-slot mounting for #1/4 - 20 or M6 hexhead fastener; both sides (#10 - 32 or M5 barnut optional)
2. IEC inlet with line filtering (power cable input)
3. Operating voltage label:

Illuminator Descriptions (Rear Panel)

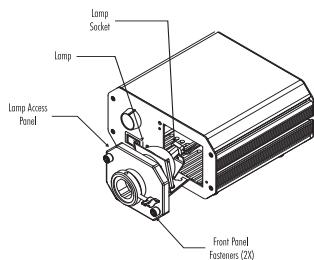

Lamp Replacement Instructions

1. To replace the lamp, shut off the power and remove the power cord from the AC outlet. To disconnect the AC power cord, grasp the plug itself; never pull the cord.
2. Located on the lamp access panel, manually loosen the front panel fasteners.
3. With front panel released, remove the lamp module from the unit.

Use caution; fan blades are accessible while lamp module is removed.

4. Allow sufficient time for the unit to cool.  **CAUTION: Lamp and surfaces may be extremely hot!**
5. Remove the lamp from the socket and place in a safe area.
6. Insert the replacement lamp into the socket; pressing firmly to ensure that pins are fully seated.
7. Close the access panel.
8. Secure the lamp access panel by manually tightening the front panel fasteners.

On Safety

Should any solid object or liquid fall into the assembly while access panel is open, have it checked by qualified personnel before operating.

Specifications

Environmental

Intended for indoor use only

Operating temperature: -4 to 104°F (-20° to 40°C)

Humidity range: 0 to 80%; non-condensing

Pollution degree: 2

Electrical (all units)

Operating frequency: 60 Hz (110 VAC) or 50 Hz (220VAC)

Power consumption: 180 watts at full light intensity

Power requirements: 110 VAC; 60 Hz
220 VAC; 50 Hz

Lamp adjustment range: 0 to 100%

Color temperature: 3200K at maximum intensity
(assuming standard EKE lamp)

Lamp life: 250 to 10,000 hours

Physical

Mass (approx.): 4.5lbs. (2.04kgs)

Replacement Parts

Lamp Replacement

Lamp Type: 150W EKE, 3250K (#20094145)*
150W EKE-HC, 4200K (#20094142)
150W EJV, 3400K (20094143)

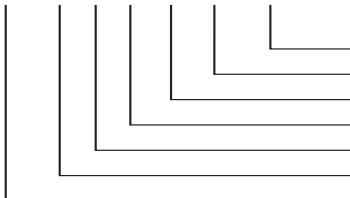

* Standard lamp type provided with illuminator.

Fuse Replacement

Fuse Type: 3.15A 250V, 5x20mm (#02610014)

Fiber Optic Illuminator

Model 21DC

MODEL 21DC

Getting Started	8
Unpacking	8
Hookup Overview	8
Description	8
Illuminator Descriptions (Front Panel)	8
Illuminator Descriptions (Rear Panel)	9
Lamp Replacement	10
Specifications	12
Model Codes	13

Unpacking - MODEL 21DC

Check that you received all items on the packing list.

Hookup Overview

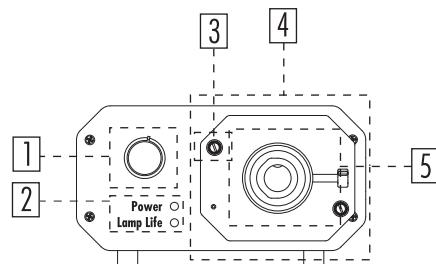

The Model 21DC Illuminator allows you to connect and control a variety of fiber optic components. To learn the locations and names of important connections see "Illuminator Descriptions" beginning on this page below.

Before You Get Started

- Turn off the power to the Model 21DC Illuminator before making any connections.
- Do not connect the AC power cord to the local power supply until the connections are completed to the Model 21DC Illuminator.
- Be sure to make connections firmly.
- Be sure that the Model 21DC operating voltage matches the "local" power supply.

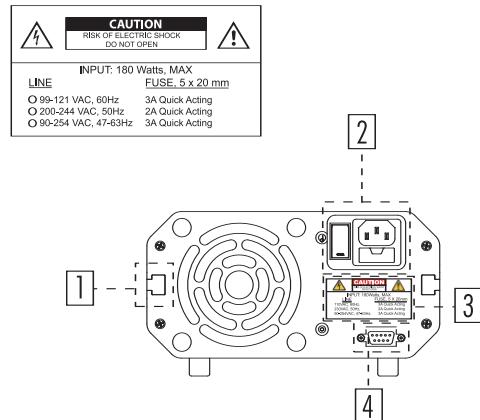

Illuminator Descriptions (Front Panel)

1. Variable intensity control knob (0 to 100%).
2. Power and lamp life indicators
3. Front panel fasteners (2X)
4. Lamp module.
5. V-port with T-handle retainer

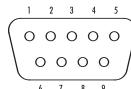

Illuminator Descriptions (Rear Panel)

1. T-slot mounting for #1/4 - 20 or M6 hexhead fastener; both sides (#10 - 32 or M5 barnut optional)
2. IEC inlet with line filtering (power cable input)
3. Operating voltage label:

4. DB-9 connector for remote operation

1 = Internal 1mA, 5VDC output
 2 = Secondary common (same as 7)
 3 = Lamp intensity control
 4 = Ties to common to engage supply programming
 5 = No connection
 6 = External shut off/interlock (external 5VDC/10mA will shut off lamp)
 7 = Secondary common (same as 2)
 8 = Chassis ground
 9 = Lamp error signal

Intensity Control

- Pin 4 activates remote operation when tied to common (pin 2 or 7). Note: Front panel control is disengaged during remote operation.
- Intensity level is controlled by Pin 3 by supplying a 0-5DC signal
- The internal voltage from Pin 1 may be used in conjunction with a remote potentiometer to vary intensity through Pin 3.

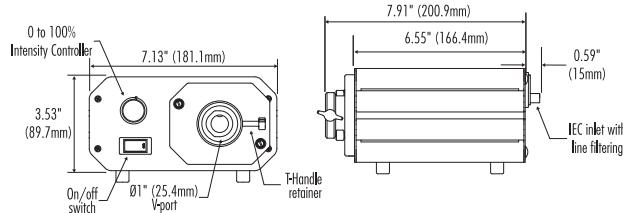

Remote On/Off

- Unit power, including the lamp, is controlled by Pin 6.
- An external isolated signal (5VDC, 10mA) will shut off power to the lamp. Power is restored to the lamp by removing the 5VDC signal from Pin 6 (open).

Lamp Error Signal

- Pin 9 is the lamp error signal output. If Pin 9 is at 5V, the lamp is okay. If Pin 9 is at 0V, the halogen lamp will burn out in the near future, or it is burnt out, or there is no lamp in the lamp module. Pin 9 is at 5V when the Lamp Life indicator is unlit. Pin 9 is 0V when the Lamp Life LED indicator is lit.

Illuminator Installation and Mechanical Dimensions

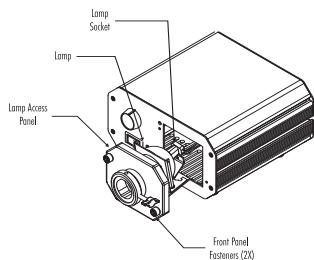

Lamp Replacement Instructions

1. To replace the lamp, shut off the power and remove the power cord from the AC outlet. To disconnect the AC power cord, grasp the plug itself; never pull the cord.
2. Located on the lamp access panel, manually loosen the front panel fasteners.
3. With front panel released, remove the lamp module from the unit.

Use caution; fan blades are accessible while lamp module is removed.

4. Allow sufficient time for the unit to cool.  **CAUTION: Lamp and surfaces may be extremely hot!**
5. Remove the lamp from the socket and place in a safe area.
6. Insert the replacement lamp into the socket; pressing firmly to ensure that pins are fully seated.
7. Close the access panel.
8. Secure the lamp access panel by manually tightening the front panel fasteners.

On Safety

Should any solid object or liquid fall into the assembly while access panel is open, have it checked by qualified personnel before operating.
